

"I've been flying a PC-12 for over five years and a thousand hours and thought I knew the airplane inside and out. It wasn't until I spent some quality time with John that I realized that my previous training had missed some important areas! John keeps things "real" in the sense that he teaches you how the airplane can throw you some curves that you most likely will see in your everyday flying and how to effectively deal with them. Seeing some of these failures while flying my own airplane not only makes you keep a razor sharp focus, but you quickly get the mindset that this can actually happen in the real world, not just in a simulated environment! Overall, I'm very appreciative of the effort John put into me and I'm positive I'm a better, safer pilot because of it! Thanks!"
